

VIII Scientific Conference
TELEMATICS, LOGISTICS AND TRANSPORT SAFETY
Katowice - Cieszyn, 16 – 18 October 2008

Conference topics :

I. Transport Telematics

- data registration and processing
- road traffic controllers
- traffic monitoring, image registration
- methods of image processing
- transport management in urban area
- transport systems modelling and simulating

II. Logistics and Integrated Transport

- load preparation, reloading management and coordination
- mechanical handling and means of transport
- coordination's methods and transport logistics centers
- integrated transport systems
- railway, air and sea transport
- transport systems safety
- transport infrastructure

III. Road Traffic Safety

- road infrastructure and urban conditions
- computer aided design systems
- traffic predictions and regional needs
- road traffic safety measures
- safe transport systems
- passive and active vehicle safety
- statistical tests, prevention methods, research programs
- influence of the law regulations on the road traffic safety
